

MANASI NAALE

AI/ML Engineer — Generative AI Engineer

☎ +91-9175292119 ✉ navalemanasi@gmail.com 🔗 linkedin.com/in/manasinavale07 🌐 github.com/manasi-navale2107

PROFESSIONAL SUMMARY

AI & Data Science undergraduate with hands-on experience in Machine Learning, Generative AI, Data Analytics, and Retrieval-Augmented Generation (RAG). Skilled in building AI-powered applications using LangChain, LangGraph, and Large Language Models. Currently working as a Data Analyst Intern at C-DAC Pune, contributing to HPC data analytics and AI-driven research systems.

TECHNICAL SKILLS

Programming Languages: Python, Java

Generative AI: LangChain, LangGraph, RAG, Prompt Engineering, LLM Applications, Multi-Agent Systems

Machine Learning: Classification, Regression, NLP, Feature Engineering, Model Evaluation

Data Analytics: Data Cleaning, EDA, Data Visualization

Libraries: Pandas, NumPy, Scikit-Learn, Hugging Face

Tools: Git, GitHub, Linux, Jupyter Notebook, VS Code

Coursework: Data Structures & Algorithms, Machine Learning, DBMS, Operating Systems

EXPERIENCE

DATA ANALYST INTERN — C-DAC Pune, HPC Tech Group May 2026 – Present

- Analyzed Green500 and TOP500 supercomputer datasets using data cleaning, preprocessing, and EDA.
- Applied machine learning techniques for missing value imputation and ranking analysis on HPC datasets.
- Developing RAG-based workflows and AI-powered research systems using vector embeddings and semantic search.

PROJECT EXPERIENCE

RESEARCHOS – Multi-Agent Research System GitHub

Python, LangChain, LangGraph, Groq, Tavily

- Developed a Multi-Agent Research System using LangChain and LangGraph that automates research planning, web search, information extraction, reasoning, and report generation through agent-based workflows.
- Integrated Groq LLMs and Tavily Search to deliver real-time research insights, enabling users to generate structured, context-aware reports from multiple information sources.

GALEMED AI – Medical Knowledge Assistant GitHub

Python, LangChain, RAG, ChromaDB, Hugging Face

- Built a Retrieval-Augmented Generation (RAG) application using The Gale Encyclopedia of Medicine, enabling accurate medical question answering through semantic document retrieval.
- Implemented vector search using Hugging Face embeddings and ChromaDB, significantly improving response reliability by grounding answers in retrieved medical knowledge.

GAPLENS AI – AI Interview Preparation Platform GitHub

Python, Machine Learning, NLP

- Developed an AI-powered interview preparation platform that analyzes resumes, identifies skill gaps, and generates personalized learning recommendations for candidates.
- Applied Machine Learning and NLP techniques to evaluate candidate profiles and automate assessment report generation for career readiness improvement.

CROPCARE AI – Smart Agriculture Assistant GitHub

Python, Machine Learning, Data Analytics

- Developed an intelligent agriculture assistant that analyzes crop-related data and provides actionable recommendations for crop health monitoring and decision support.
- Applied Machine Learning techniques, feature engineering, and predictive analytics to generate data-driven insights aimed at improving agricultural productivity.

EDUCATION

Bachelor of Engineering in Artificial Intelligence & Data Science Expected May 2027

AISSMS Institute of Information Technology, Pune

SGPA: 9.28 / 10

ACHIEVEMENTS & CERTIFICATIONS

- Solved 200+ Data Structures and Algorithms problems on LeetCode.
- Google Developer Student Clubs Certification.
